Abstract of JP9009382

PURPOSE: To provide the cordless earphone not requiring management of battery.

CONSTITUTION: Left/right earphones 6 not in use are contained in an auxiliary battery case 2 mounted removably to a player body 1 and a charging battery for reception means built in the left/right earphones 6 is charged in this case. Since the power consumed at reception by the left/right earphones 6 is sufficiently smaller than the power consumed when the player main body 1 conducts playing, the charging capacity at one charging is sufficiently decreased and the capacity of the charging battery built in the left/right earphones 6 is enough to be small.
